DECORATIVE PARROT TULIPS

Newest of Tulips are the named varieties of the Parrot type, with blossoms the largest of any group. Their huge fringed petals, in brilliant coloring, present an attractive contrast to the uniformity of their stately neighbors in a Tulip planting. The four varieties illustrated are among the most brilliant.

Orders for \$3.00 and over are prepaid. Add 35c for orders under \$3.00.

FANTASY. (21 in.) At top. Spot of the Darwin Clara Butt, with the same true pink coloring. Petals are over 3 inches long and 2 inches wide. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

SUNSHINE. (15 in.) Center. Spot of Cottage Bouton d'Or. Large fringed petals of bright true yellow. Doz., \$1.60; 100, \$11.50; 250, \$26.00.

ORANGE
WONDER

KANSAS. (16 inches.)

This Darwin hybrid has won first place among the few white tulips having the Darwin form and size by demonstrating its merit in the garden. It is the best for this purpose of all the Triumph class, which was bred by crossing Darwin and early single varieties. It blossoms a few days earlier, but maintains its quality throughout the season of the other tall, late flowering varieties. We recommend it as the most reliable white for your late flowering tulip planting. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

KANSAS

ORANGE WONDER. (30 inches.) Here is a glowing color which no other variety can match. Recently introduced as a Darwin hybrid of the Mendel group, it has small resemblance to earlier Mendel varieties. It blossoms somewhat earlier than most Darwins, but holds in good condition until all Darwins are in flower. Equalling the largest Darwins in size, and held upright on strong stems, its glossy petals of bright orange blending to crimson make a brilliant display. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

CITY OF
HAARLEM

CITY OF HAARLEM. (Darwin, 27 in.) Professionals in both Holland and this country rate this the finest Red Darwin, unmatched in bright coloring, shape and size. It is true cardinal-red, with a touch of scarlet at the petal's edge, and stands tall on strong stems. It has the classical cup shape of the Darwin clan. Doz., \$1.60; 100, \$11.50; 250, \$25.50.

All Tulip Bulbs offered in this catalog are Top Size, 12 ctms. up, except where noted in case of desirable varieties which do not reach that size.

SMILING ANN. (28 inches.)

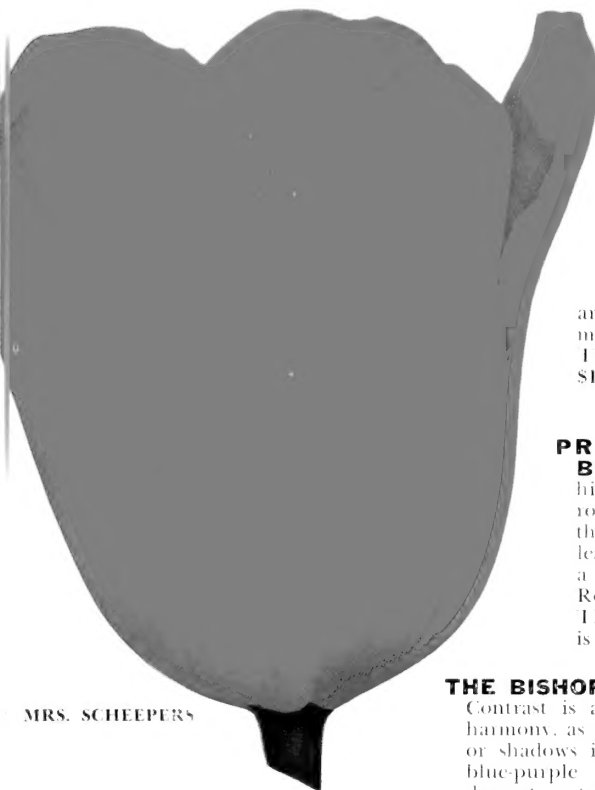

Though classed as a Cottage Tulip, this new variety has the shape of a Darwin, with exceptional size and height. There is no Darwin with the delicate true pink coloring which in this case covers, not merely the tip, but fully half of each petal. True pink is a scarce color among the late Tulips, and for those who plan color schemes, we recommend this variety, to provide it. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

SMILING
ANN

Best Garden Tulips \$5.50 Prepaid

For vivid coloring and giant flowers, on tall stems, these varieties are our selection as the best now available, new or old. Nothing finer can be obtained for a beautiful, colorful display in the spring garden. Bulbs of each variety are separately bagged and labeled, so you can arrange them in your own color scheme. They are the largest size produced by the leading growers in Holland, the cream of the crop.

MRS. SCHEEPERS

MRS. JOHN T. SCHEEPERS.

(Cottage, 30 in.) The finest yellow Tulips are found in the Cottage clan and this we believe is the best. No variety surpasses it in size and none equals its rich coloring of true chrome-yellow.

Its large oval blossoms are upheld on 30-inch stems, making it one of the tallest Tulips. **Doz., \$1.50; 100, \$10.50; 250, \$23.00.**

PRIDE OF ZWANENBURG

PRIDE OF ZWANENBURG.

(Darwin, 29 in.) It is high praise to say that this rose-pink Tulip is better than Princess Elizabeth, the leader in its color since Darwin Tulips were introduced. But this praise is merited by a flower so large, on 29-inch stems, with deep rose coloring, and a perfect Darwin form. Rose-pink is a color essential in every color scheme, and every flower arrangement. The deep coloring of this variety is warmed by a flush of salmon. Inside the cup it is light red, with blue anthers and white base. **Doz., \$1.50; 100, \$10.50; 250, \$23.00.**

THE BISHOP.

(Darwin, 29 in.) Contrast is as essential to color harmony, as is the bass in music, or shadows in a painting. Dark blue-purple Tulips supply the deepest contrast when planted beside lighter tones of other colors. Each brings out the beauty of the

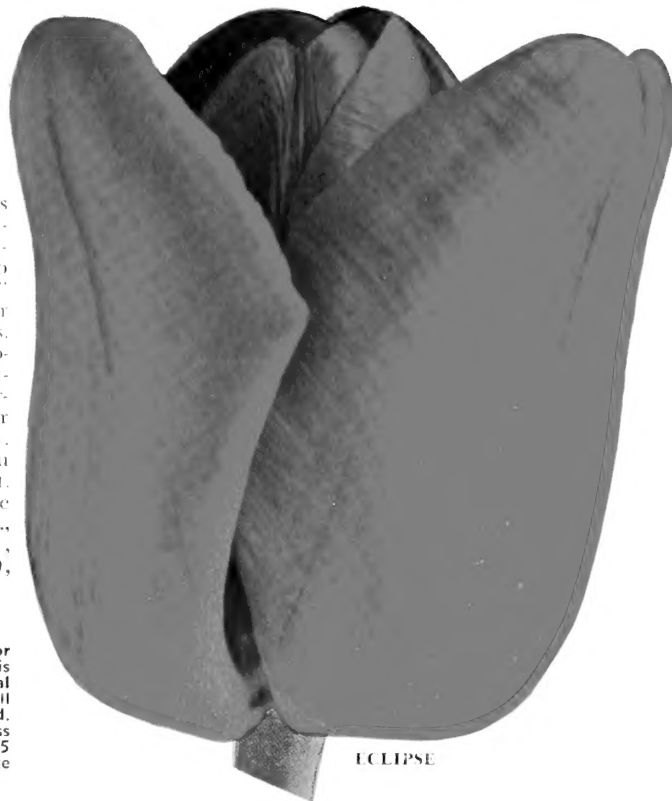

others and adds to their brightness. The Bishop is in no sense a "black" Tulip. Its color is a luminous, clear blue-violet, lovely in itself and a perfect foil for lighter hues. Wherever you may plant it, it will produce harmony. **Doz., \$1.50; 100, \$10.50; 250, \$23.00.**

DELIVERY

All orders for items listed in this catalog which total \$3.00 and over will be delivered prepaid. With orders for less than \$3.00, add 35 cents for postage and handling.

THE BISHOP

ECLIPSE

ECLIPSE. (Darwin, 27 in.) Of the newer red Darwins this dark beauty has won the leadership not only with its color, but with other fine qualities of value in the garden. Its large size, smooth form, fine texture, and strong stem, make it stand out in every planting, especially when flowers of lesser strength begin to waver. It is a rich dark red with a blue base encircled by white, glowing in the garden, or under artificial light. **Doz., \$1.60; 100, \$11.50; 250, \$25.00.**

4 GREAT Peonies

\$4.50

Of all the new varieties introduced, relatively few survive the test of garden culture and take their place among the acknowledged leaders. The peonies you plant may outlive you, so it is important to choose varieties for permanent planting which have demonstrated lasting merit. The four offered on this page are among the world's best, for display in the garden, or in the flower show. The flowers of each will last for days if cut in the bud stage and allowed to open in the house. Plant as soon as received in full sun, giving three feet in direction from other plants. Do not set the crown, from which the eyes grow, more than two inches below the soil surface.

THIS IS NOT A MIXTURE. Though priced at less than a mixture, it is a labeled collection of finest named varieties in a full range of colors. You know in advance the color of the flower each bulb will grow, and can plant them for a planned color effect, which will make your tulip display outstanding.

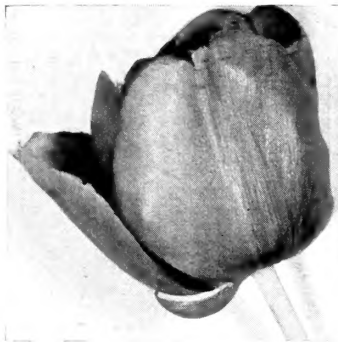

Tulips are especially adapted to color-scheme planting. Each of the rainbow colors enhances the beauty of its neighbors, while in turn it acquires new charm because of its companions. Only with labeled bulbs is such careful planting possible, since in a mixture, bulbs cannot be identified, and their arrangement is a matter of chance.

Tulips are the first flowers to bloom in the spring that include all rainbow colors. So varied is their color range, it is possible to produce a show in the May garden, which cannot be surpassed by later blooms. To enable every garden to take advantage of this opportunity, we have for many years made our rainbow collection the best fall bulb value available to home gardeners.

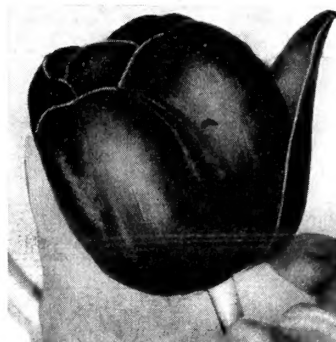

Each variety is outstanding in its color-class. Nor does the low price mean small bulbs—they measure 11-12 centimeters in circumference and bear flowers of the largest size.

MARGARET ROSE

FARNCOMBE SANDERS

QUEEN OF THE NIGHT

PRINCESS ELIZABETH

SCARLET AND GOLD

Princess Margaret Rose, Cottage, 25 in. This lovely flower is a "sport" of Inglescombe Yellow, known as the "Yellow Darwin." Edging each cup-shaped petal of soft golden yellow is a scarlet border, making it conspicuous but pleasing. Plant them in a group at a focal point in the border.

RED

Farncombe Sanders, Darwin. The only bright scarlet among the Darwin clan, this variety has held its own unchallenged by newer varieties. Its brightness is softened as usual with Darwins, by a pastel overtone. It stands on 25 inch stems. The flower is cup-shaped, with white base.

DARK VIOLET BLUE

Queen of the Night, Darwin. So dark is the purple coloring of this variety, it is often called a "black tulip." But its large flowers on 28 inch stems and the richness of its color make it outstanding in any company. With yellow, pink and red companions, it brings out their beauty.

PINK

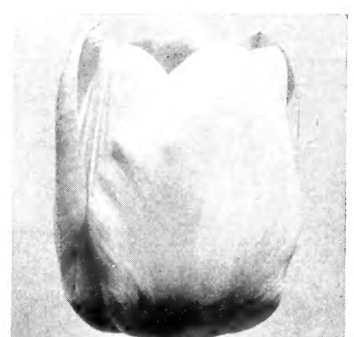

Princess Elizabeth, Darwin. This stately, well formed tulip was long the undisputed leader of all pink varieties, and still stands first in the opinion of many judges. Its large flower is bright carmine rose, silvery rose at the petal edge, and deep rose with white base inside. It is 26 inches tall.

GOLDEN HARVEST

CORDELL HULL

KANSAS

YELLOW

Golden Harvest. Cottage. This is one of the largest yellow tulips, bearing on stems 28 inches tall large flowers of golden yellow and Darwin shape. It blooms early and its flowers last through a long season, increasing in size and beauty. It is larger than any yellow Darwin variety, and is beautiful in the border.

RED AND WHITE

Cordell Hull. Rembrandt. 24 in. Rembrandt tulips are all sports or mutations of Darwin varieties. This is a "broken" form of the popular Darwin Bartigon. It has petals of rosy red striped with white, and the same season of bloom as other Darwins. In border it provides an attractive contrast.

WHITE

Kansas, Darwin Hybrid. This large snow white flower, with yellow center, was bred by crossing a Darwin tulip with an early variety. It blossoms 10 days earlier than other giant whites, but has the size and cup shape of the Darwins and is borne on a strong 22 inch stem. Plant them in a group, rather than singly. (3)

Vaughan's Tall, Late, Giant Tulips

Darwin Tulips

Darwin tulips are characterized by a soft overtone which gives their colors a pastel effect. The flowers are cup-shaped and carried on tall, stiff stems. In color range they include all the rainbow hues, in amazing variety. Yellow, which long was missing from the Darwins, is now represented by several fine varieties; and new varieties include splendid giant whites.

Included in the variety lists on this and the following pages are many newly introduced varieties which show improvement in color, height, size or in some other important respect. But we retain the best of the old varieties, many of which may never be surpassed.

Pink and Rose Darwins

AFTERGLOW. (26 in.) All the splendor of a glorious sunset is suggested by this wonderful tulip with its deep orange tints suffused with salmon, and edged apricot orange. Tall, stately grower. Doz., \$1.35; 100, \$9.00; 250, \$20.00.

ARISTOCRAT. (30 in.) This is a magnificent garden Tulip of recent introduction, very tall with very large carmine rose lighter edge flowers, truly an aristocrat among tulips. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

CLARA BUTT. (20 in.) Newer and larger pinks may be found, but Clara Butt remains a favorite. It is a true pink, wholly free from lavender, rare color and a charming flower. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

KING GEORGE V. (28 in.) An immense flower of brilliant rose with a light blue base. The color is dazzling in its brilliance, and this is without doubt one of the finest and most beautifully formed Darwins. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

MR. VAN ZYL. (30 in.) Glorious dark rosy pink with a border somewhat paler. A new Darwin Tulip very much admired in our Trials on account of its striking color, large size, and excellent texture. Doz., \$1.50; 100, \$11.00; 250, \$25.00.

PETER DE HOOGH. (24 in.) A new pink Darwin of unique beauty. Its long petals are soft true pink slightly deeper on the edges, an excellent color for garden display or cut flowers. Doz., \$1.35; 100, \$9.00; 250, \$20.00.

All varieties of the tall, late-flowering giant tulips are likely to be grouped in popular language as "Darwin tulips." They are often sold that way, though among them there are several clans, each having definite family resemblances, of which the Darwin, Darwin hybrids, Cottage and Breeder are most numerous.

All these bloom about the same time, and harmonize perfectly in garden plantings. They can be selected by color, height, and form for use in the garden border without regard to their ancestry. The distinction between these various clans tends to become less definite, as they are interbred by growers seeking improved varieties. We continue to list each tulip clan separately, however, to aid you in identifying favorite varieties, and also to give additional descriptive information. For an interesting planting, varieties of all types should be used.

All Bulbs Listed on this Page are TOP SIZE 12 cms. up.

Colorful Cottage Tulips

All Bulbs Listed on this Page are TOP SIZE 12 ctms. up.

Most new tulips introduced since the war have been of the Cottage clan. By crossing with other types, their clear, bright colors have been united with giant size, so that the largest of all tulips are found among new Cottage hybrids. We list these new varieties, and older ones which are still unsurpassed, in their color classes.

Cottage tulips should be included in every tulip planting. They harmonize perfectly with Darwin and Breeder varieties, and supply a quality of brilliant color which the others need, to set off their softer tones. Some blossom a little later than the Darwins, carrying the tulip season well into the early days of June.

Richly Blended Breeders

All Bulbs Listed on this Page are TOP SIZE 12 ctms. up.

From Breeder tulips, most of the tall, large flowered types have been developed. These were the "mother bulbs" of ancient Dutch breeders, grown not for their own rich beauty, but because among them would appear flowers of the striped and blotched coloring then esteemed so highly.

These stripes and blotches are now known to have been caused by a virus disease; and the Breeder tulips are valued for their own beauty. Among them are some of the tallest and largest varieties of all, and many colors rare among flowers—browns, bronzes, purples, dull gold and dark lilac, exquisitely blended. One of the most fragrant of all tulips is Don Pedro, a coffee-brown.

ALICE KEITH. (27 in.) Very bright orange-yellow edged golden with small olive green base. Large flower on strong stem. One of the finest Breeder Tulip for bedding. The flower becomes more beautiful as it ages. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

BACCHUS. (28 in.) Though introduced over 300 years ago, it has no superior in clear, richness of color and beauty of form. The color is very similar to the purple of Concord grapes. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

CHERBOURG. (30 in.) Undoubtedly one of the finest Breeder Tulips. A deep tone of golden yellow, with a suffusion of terra cotta, the deeper tone of yellow growing stronger toward the edges of the petals. Doz., \$1.50; 100, \$10.50; 250, \$23.00.

CHINESE BANDIT. (26 in.) Immense oval flower of Chinese red blended with warm orange-bronze, a rich and bright color effect. Inside the color is brighter with a vivid yellow base. It is said to be the largest of all Breeder tulips, and in the sun it is outstanding in the border. Cut blooms have exceptional lasting quality. Doz., \$2.10; 100, \$16.50; 250, \$36.00.

DILLENBURG. (27 in.) A glorious salmon orange shaded rose. The flowers are large and borne on strong, stiff stems. Highly recommended for exhibition purposes but should not be used for early forcing. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

SINGLE EARLY TULIPS IN A SPECTACULAR BED

DUTCH IRIS

Early Tulips for Front Yards

Front yard flowers are back in fashion, especially for modern homes, with picture windows, set low to the ground level. Here low planting is essential, and what could give greater delight to those who look out the window and the passerby, than a bed or border planting of early tulips, which were bred for exactly such a place? They will bloom two weeks or more before the tall, late varieties and bring the first brilliant red and pink flowers to the garden display.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but somewhat later.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering.

Daffodils are the first of the major garden flowers to blossom in the spring. This makes them doubly precious, as heralds of a season of joy, after the long winter.

The daffodil tribe likes a cool root run and its flowers are at their best in the cooler days of spring. Therefore it is essential to dig the soil deeply and provide humus. Like the tulip the daffodil will not thrive if there is fresh manure in the soil and commercial plant food should be used when the bulb is planted. It likes a moist soil but it must have excellent drainage. The plant food should be mixed in the soil below the bulb and if the soil is heavy, a cushion of sand is advisable.

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors.

They are treated to speed up flowering and will bloom in January. Bulbs may be flowered for years. We regard these amaryllis to be one of the outstanding horticultural achievements since war ended.

Prepared Bulbs for January Flowering. Delivered about Nov. 15. Orange, Red, Scarlet, Dark Red, Salmon Striped or White, as you select. Each, \$4.50.

Regular Bulbs, flower in February-March, delivery about Dec. 15, your selection of Orange, Red, Scarlet, Dark Red, Salmon Striped, or White. Each \$3.00.

American Grown Bulbs

Our strain of giant flowered amaryllis is rich in brilliant red, and lovely white flowers, with many in which the white ground is vividly marked with contrasting tones of red, pink and salmon.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day, until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again.

Flower Seeds for Fall Sowing

When you sow seeds of annuals in Fall, you imitate Nature's method.

The ideal time is just before the ground freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable, if the sides are protected with boards it will save the seed from washing away. A light covering may be used if birds are troublesome. Plant at half the depth used when sowing seed in spring. Broadcast all small seed.

★Varieties preceded by star are especially recommended for sowing in the fall above your bulbs. They will grow in the spring and blossom after the bulbs. Their shallow roots will not interfere with the bulbs maturing properly; their growth will conceal the bulb foliage after it grows yellow and unsightly.

"S" refers to the three standard or upright curling petals; "F" to falls or drooping petals.

Irises are most effective if planted 3 of a kind in a clump.

As soon as iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

DYKES MEMORIAL MEDAL. This is an award made annually in America, France and England for the best Iris of the year. If you select one of these winners you may be assured of getting an iris that is almost perfect.

Vaughan's Peonies

PEONY THERESE

PEONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Peonies may be planted from September first until May. We offer Divided roots, having 3 to 5 eyes.

The figures following the varieties are the latest ratings given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Light and Dark Pink and Rose

EDULIS SUPERBA. (7.6) Usually blooms for Decoration Day. The large flowers are a beautiful deep, vivid pink, and are borne profusely on tall, strong stems. One of the most fragrant of all Peonies and one of the best for cut flowers in its color and season. \$1.00.

Its immense cupped shaped flowers of bright old-rose pink are often 9 to 12 inches in diameter and are held well above the foliage on tall, stout stems. Rose-like fragrance; late. As a garden variety, or as a cut-flower or show variety, this one is hard to beat. \$2.00.

MONS. JULES ELIE. (9.2) By many considered most beautiful of all Peonies. The flowers are an immense ball of imbricated petals incurved like a chrysanthemum; the color a glistening lilac-pink shading to deeper rose at the base all overlaid with a sheen of silver. Comes into bloom early and is one of our finest varieties for cutting. Very fragrant. \$1.50.

MRS. F. D. ROOSEVELT. (9.3) Like the person it is named for, this Peony is going places. It is a strong grower and a dependable, free bloomer. Hardy Perennial Plants for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

We do not list the kinds which need special protection through the winter. It is always well to apply a light mulch of straw or excelsior over newly planted perennials after the ground has frozen. This will tend to prevent winter thaws and frost heaving.

No orders for Perennial Plants accepted for Fall delivery after OCTOBER 5th.

LONG-LASTING PLANT FOOD RICH IN ORGANICS

GROGANIC. Research has proved that plants respond to food elements which are found in both mineral and organic forms. Those derived from minerals are effective quickly, and in soil temperatures too low for bacterial activity. Organics become available to plants more slowly, and require warm soil and bacteria to release their food content completely.

By combining mineral and organic elements, long-lasting nutriment can be provided. Groganic contains no filler whatever. Bulk is provided by dried blood, fish scrap, castor pomace and vegetable meal, all relatively expensive, which break down slowly. Boron is added to correct acidity and manganese sulphate to prevent chlorosis (yellowing) in leaves. Chemical nitrogen, phosphorus and potash are added—all quick acting and stimulating growth in early spring.

The analysis of Groganic is 6-11-6, 6% nitrogen, 11% phosphorus, 6% potash. An application of 15 lbs. per 1,000 square feet will provide continuous feeding effective in 10 days and lasting 300 days. 5 lbs., 95c; postpaid \$1.25; 10 lbs., \$1.45; postpaid, \$1.95; 25 lbs., \$3.25; 80 lbs., \$7.65.

CHEMICAL WEED KILLERS VAUGHAN'S NEW CRAB GRASS KILLER (SODAR) IS BEST OF ALL AND COSTS LESS

S-449 Researchers were surprised last summer by the effective way in which a chemical new to the weed killing group removed crab grass and chick weed from test plots without the slightest injury to the turf grasses. Not only did it do a better job than those previously used, but it was far more economical and easier for an amateur to apply. We think so highly of this discovery that we offer it under our own name, as Vaughan's Crab Grass Killer. The chemical which performs so well is Di Sodium Methyl Arsonate. It can be applied early or late in the season, on young plants or those about to seed. A sprinkling can work well on small lawns, and pressure sprayers on larger areas. One treatment kills young plants, mature plants may need two. 4 ounce, treats 1,000 sq. ft., \$1.25; postpaid \$1.35; 1 pound, treats 4,000 sq. ft., \$3.50; postpaid \$3.75; 5 lbs., treats 20,000 sq. ft., \$16.25; postpaid \$16.75; 30 lbs., treats 120,000 sq. ft., \$90.00, by express collect.

Merion Blue Grass Now at Our Lowest Prices

Residence of Dr. John E. Walsh, 6529 Birch Street, Gary, Ind.

He says: "From seed of Vaughan's Merion Blue Grass sown in September, 1954, I had grown a luxury lawn by early summer, 1955. Though inexperienced in lawn making, I prepared the soil and sowed the seed. Its sturdy growth, rapid and complete coverage of the area and beautiful color are not due to any special care or treatment, but entirely to the merits of Merion. From the comments of my friends, and many passers-by, I know they share my high opinion of Vaughan's Merion Blue Grass."

Seed of Vaughan's Merion Blue Grass is available this fall at the lowest prices ever, thanks to a good 1955 seed crop. Last year heavy fall demand forced higher spring prices. This could happen again.

Vaughan's introduced Merion Blue Grass to the public in 1951. Since then its beauty has been placed on display in thousands of lawns. For proof of its superiority, inquire in your neighborhood for a Merion lawn. Its owner will be glad to show it and tell you why it is the lawn you dream about, far ahead of all rivals both in quality and economy.

More beautiful, with its dark green color and thick turf, covering the ground like a long-pile carpet.

More economical, because only one-third as much seed is worn to start, and it does not need reseeding.

Stands wear with less care, as proved on golf tees, where it repairs divots quickly; on football fields, where it endures the roughest treatment possible. Your children cannot give it any greater test than it receives in these two sports.

Why wait any longer for YOUR Merion lawn?

Sow straight Merion Blue Grass in the Fall as early as practical. For late Fall seeding use our Merion Formula.

MERION BLUE GRASS

For those desiring straight Merion Blue Grass we can offer up to a maximum of 25 lbs. per customer due to the limited quantity. One lb. will sow 750 sq. ft. 1 lb., \$3.75; 3 lbs., \$11.20; 5 lbs., \$18.50; 10 lbs., \$36.50; 25 lbs., \$90.00. All prepaid.

MERION BLUE GRASS FORMULA 100% PERENNIAL GRASSES

1 lb. covers 750 sq. ft. 1 lb., \$2.35; 3 lbs., \$7.00; 5 lbs., \$11.50; 10 lbs., \$22.50; 25 lbs., \$55.00. All prepaid.

CONTAINS THE FOLLOWING GRASSES

MERION BLUE GRASS. Because its growth is more stocky and spreading than standard blue grass, it covers more ground, and less seed is required for a given area. Over 1 million seeds of this grass in 1 lb. of Formula.

PENN STATE CHEWINGS FESCUE. Penn State Fescue spreads by root runners, and leaves match the texture of Merion blue grass. Thickens the turf, does well on sandy soils and in shade.

HIGHLAND BENT, drought and disease resistant, it spreads underground and makes a thick turf. Its dark green color persists through summer drought and heat; and it germinates quickly after sowing.

RED TOP, a nurse grass to help keep weeds under control until the Merion Blue Grass can take over, which it does by rapid spreading after it becomes established.

Produces thicker turf, stays greener all summer and stands closest mowing. 1 pound covers 750 square feet, 3 times as much as standard blue grass mixtures, thus being no more expensive to sow an equal area.

Prices of all grass seeds are subject to change without notice.

In the fall it is more important than ever to sow only permanent grasses. For a lawn of permanence and beauty, our famous Parks mixture is recommended, containing fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains a liberal amount of Creeping Red Fescue, which spreads from the roots and so helps thicken the turf and crowd out weeds. See prices above.

No experience is required to succeed with these flowers, which come already planted and require only water to start their growth. Keep the container filled with water as high as the arrow line, and place the container in your sunniest window after top growth begins. Each stem will bear a cluster of flowers. These bulbs are grown in France, where a special curing and heat treatment is given them to insure early blooming. They are planted in Delft-blue waxed paper bowls in Holland.

Pointers on Planting Fall Bulbs

The first two months of spring, when garden beauty is most welcome, yet most rare, hardy bulbs supply the dominant flowers. And of all flowers, they offer the easiest, surest success.

Spring flowering bulbs prolong the garden season for a month at least; and in most sections they bloom at a time when all their surroundings are fresh and beautiful; when moisture is ample, weeds have not yet grown, and few if any insects bother them.

The greatest enemy of fall bulbs is poor drainage; they must be planted in locations where water drains away quickly, and if there is any doubt about this, beds should be raised above the surrounding surface sufficiently to insure it.

Bulbs will grow well in any reasonably good garden soil, but it should be well prepared to a depth of at least twelve inches. The depth of planting varies with the kind of bulb, but the depths shown on the accompanying planting chart are minimums, with deeper planting advisable in many cases.

When tulips are to be left for several years without lifting, bulbs should be placed 8 to 10 inches deep, where they will be cooler, will produce fewer "splits" and continue to maintain blooming size for long periods. Use no manure on bulbs unless it has been thoroughly rotted and can be spaded into the ground several weeks previous to planting. A balanced plant food applied to the soil at the rate of 5 lbs. to 100 square feet and spaded into the soil will benefit the bulbs.

The earlier bulbs blossom in the spring, the more important it is to plant them early in the fall, so they will have time to make root growth in their new location. Daffodils and hyacinths especially benefit from early planting.

After the soil has been prepared, bulbs may

Figures given in this table are minimums, and in some cases should be greater. See discussion in column headed "Pointers on Planting Fall Bulbs."

be planted with a trowel, or by the use of a blunt-end dibber. Avoid using a pointed dibber, or any device which will permit the bulb to be caught by the sides of the hole with air beneath it. The bulb should rest on the bottom with soil packed firmly around it.

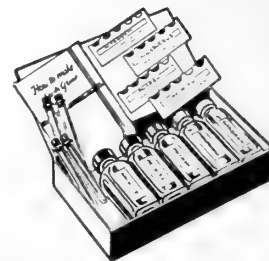

What is known as the Dutch method is sometimes followed in planting beds. Soil is thrown out to the proper planting depth, bulbs are then placed where they are wanted and the soil filled in above them. This is a convenient method where a formal pattern is followed in placing the bulbs.

In case of necessity, however, fall bulbs can be planted as late as the ground can be worked. It is a good rule to plant all bulbs as soon as you receive them and you are willing to disturb established beds. Tuips should go in when the leaves fall. When late planting is necessary, cover the bed with a mulch of

leaves after the ground has frozen. This will prevent winter thaws, and consequent frost heaving.

After bulbous plants have flowered, their leaves should not be cut or disturbed until they turn yellow, which indicates that the bulbs have ripened.

Red Emperor Tulip

LARGEST OF ALL

This huge scarlet flower with 6-inch petals, is not only the largest but the earliest Tulip, coming into flower before the single early varieties. Known to botanists as Tulip Fosteriana, it is a species, or wild form. Perhaps an ancestor of cultivated forms. Red Emperor has never been excelled in size, earliness and brilliance of coloring. A group planted in a conspicuous place in your garden, will blossom while Daffodils are still in flower, bringing spring's most vivid color. **Top size bulbs, 11 ctns. or over, doz., \$1.60; 100, \$11.50; 250, \$25.00.**

PEONY-FLOWERED TULIP, EROS.

The fully double blossoms of this true pink Tulip are held upright on strong 20-inch stems. They flower with the Darwin Tulips, and wherever a group may be planted they will dominate the show. Their blossoms average 4 in. in diameter, and resemble Peonies in size and form. **Top size bulbs, 12 ctns. or over, doz., \$1.60; 100, \$11.50; 250, \$25.00.**

TULIP, MT. TACOMA. Even

larger than Eros and fully as double, this white Tulip is easily mistaken for a Peony. The late double Tulips are an entirely distinct type from the early double strain. Mt. Tacoma has strong 23-inch stems, and flowers with the Darwin Tulips.

Top size bulbs, 12 ctns. or over, doz., \$1.50; 100, \$10.50; 250, \$23.00.

Mixture of Double Late Tulips

Includes many varieties of varying colors, all fully double, with large flowers on tall stems, flowering with the Darwin Tulips. **Doz., \$1.50; 100, \$10.50; 250, \$23.00.**

CANDY-STICK TULIP, Clusiana. Like Red Emperor, this is a species Tulip, but its flowers are admired for their charm, not large size. Outer petals cherry-red, inner creamy white. Flowers with the Daffodils, prefers a sheltered location, in porous soil. **Doz., \$1.80; 100, \$13.50; 250, \$30.00.**

GEN. DE WET

For its size, bright color and rare fragrance, Gen. De Wet is considered by many the finest of all Tulips. It is 10 inches tall, with the largest flower of any early variety and blossoms 2 weeks before the first Darwin. The blossoms develop slowly, the color growing richer as they mature, and remain in good condition for an exceptional period. **Top size bulbs, 12 cts. or over, doz., \$1.50; 100, \$10.50; 250, \$23.00.**

Its brilliant scarlet and gold blossoms stand out in the garden, to delight eyes eager for bright spring color. It is a vigorous grower, 10 inches tall, and if only one early Tulip is grown this is the one to command attention. **Top size bulbs, 12 cts. or over, doz., \$1.60; 100, \$11.50; 250, \$25.50.**

ANEMONE BLANDA (Blue Beauty)

(*Atrocaculca*)

In lightly shaded locations these hardy bulbs bear quantities of star-shaped flowers of rich violet-blue in early spring just after the crocuses have bloomed. The fern-like foliage grows 3 inches tall, above which the flowers open. They are well suited for rock gardens, or in masses under trees. Plant in clumps 3 inches deep and 2 inches apart. **Doz., \$1.25; 100, \$8.00; 250, \$18.00.**

ANEMONE BLANDA

Hyacinths Bring Garden Earliest Pink and Blue

PATRIOTIC BORDER COLLECTIONS OF BEDDING HYACINTHS

For planting in a balanced color arrangement.

24 bedding size bulbs, 8 each red, white and blue, separately bagged and labeled, \$3.50, prepaid.

48 bulbs, 16 each red, white and blue, separately bagged and labeled, \$6.75, prepaid.

Hyacinths contribute to the spring garden fragrance as well as colors which at that time no other flowers can give so well.

They serve to border paths, near all garden architecture, including ornaments such as bird baths, pools and fountains, and groups of Hyacinths may well be worked into the border planting, where they will provide a needed color foil or accent.

For garden planting, it is not necessary to use the largest forcing sizes. Bulbs of third and bedding sizes will do well. Take especial care to plant them in well-drained soil, and if there is any doubt, elevate the bed a few inches to keep them above water. Plant bulbs 6 inches deep; after the ground has frozen a light mulch to keep the frost in will benefit.
